

In Shared Hosting One Web Server Hosts Number of Websites. Every User assigned some Space on Server. In Server hundred of or even Thousands of Websites. All Sites Using all Resources, like Bandwidth, Disc Space and Processor Speed, of Same Server.

Advantages :

Cheap Cost or Affordable Price:

Available at Most Affordable Cost. Today thousands of Companies Offering at Very Cheap Prices. Most Common Option In the Industry. Its Market Share is Also High as Compared to Other Host Options.

No Maintenance Cost:

It Comes with All Inclusive Price. You need Not Bother About Server Maintenance and Setup

Fast Setup:

In Case of Shared Host Your Site Could Be Live With in 24 Hours of Purchase. Unlike Dedicated Host it Could Setup Instantly. No need to be a Technically Sound Person.

Good For Small Sites:

It is the Best Option For Beginners and Small Websites.

Disadvantages :

Security issues:

Security is one Of Main Disadvantage.Backup Process is Very Hard Task As the thousands of Websites Hosted on Same Web Server.Security is one of main disadvantage of Shared Hosting. Backup Process is very hard task as the thousands of Web sites Hosted on same Web Server.

Limited Resources:

Thousands Of Web Sites Using Same Resources.That's Why If One User Site consumes More Resources of web Server Other Sites Might Slow Down.In Other Way One Problematic Website May Cause Crash of All Other Sites in the Same Server.

Dynamic IP:

Many Providers Does not Give Static ip For Shared Website Hosting. Dynamic ip is very risk when You Going for E-commerce Transactions On Your WebSite.This Disadvantage Could Overcome By Choosing Static iP.Some Companies Gives a Option to Choose Static or Dynamic IP. They Will Charge You Small Amount for Static IP.

Not good For Large Data Base E-Commerce Sites:

Large Websites Need Plenty of Server Resources.So They are not Suitable of it. Final Word: No Doubt It Has Major Share in Industry. But Before You Going to Buy a Shared host Plan, You Must Know Your Requirements.Then Proceed. Best of Luck.
